master s thesis from the year 2018 in the subject engineering computer engineering grade 3 71 cyprus international university language english abstract in this thesis three wireless sensor networks ad hoc on demand distance vector dynamic source routing protocol and optimized link state routing protocol have been simulated and compared in typical iot scenarios their performance was evaluated using three performance metrics and then they were compared the performance metrics are routing overhead average end to end delay and throughput different number of nodes with different percentages of mobile nodes were analyzed specifically number of nodes analyzed were 20 40 60 and 70 with the number of mobile nodes 10 15 and 20 using opnet while with ns 3 20 60 and 100 nodes were analyzed for each of the number of nodes all the number of mobile nodes were evaluated the routing protocols were analyzed using the opnet simulation software and ns 3 and the environment size for the simulation was 1000m by 1000m iot has continue to grow bigger since from its inception many

mobile devices are now available the internet and its application have only grown bigger and better as iot is continually growing so also is the complexity as a result issues pertaining routing have also increased many researches have been made in attempt to proffer solutions that will either minimize or eliminate these routing issues different routing protocols have been designed with different specifications for different applications of the iot also attempts have been made to implement routing protocols of other types of networks in the iot
